Chatbot EcoAliste

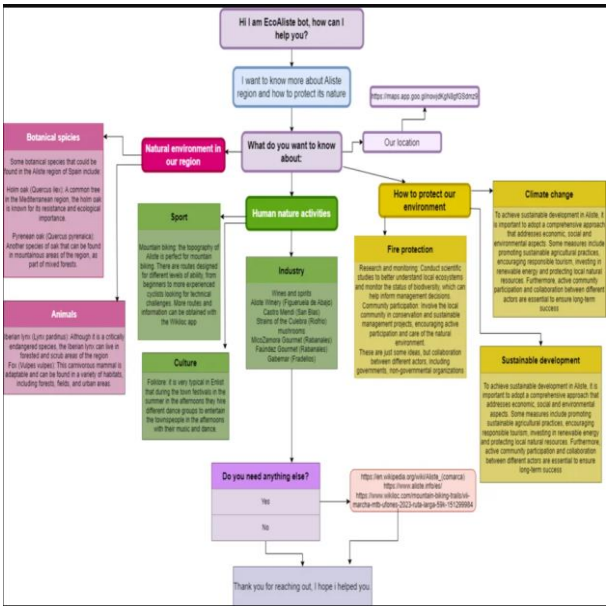
General Info - Short description

A bot that introduces users to the region and educates them on how to live in synergy
with nature and how to help preserve nearby ecosystems

Project goal

To help students create IT that will improve knowledge about their region and help them
preserve nature and ecosystems

Chat dialogue image



Define the problem

In a region that lives off nature and where people produce from nature, there have been
problems due to fires, climate change and improper use of natural resources.

What groups of people are affected by this problem?

This problem affects all groups of people regardless of age or gender.
In our youth, we acquire bad life habits that damage our enviroment and health.

Who is responsible for this problem?

Modern lifestyle, environmental and food pollution, poverty, not enough knowledge

How big is the problem?

The problem is big, it covers all populations and it is getting bigger.

Why did you choose this problem, why is it important to solve it?

We want to make young people aware and encourage them to live in sinergy with nature.
It is a state of mind that needs to be worked on.

How does a chatbot solve this problem?

Educates about region, traditions and problems and how to find a way to take care of traditional way of life and nature.
